This policy is effective from 28th of March of 2023.

INTRODUCTION AND DEFINITIONS

To fulfil its mission, it is necessary for the Infrastructure to protect its assets. This document presents the *policy* regulating those activities of *participants* related to the security of the Infrastructure.

Definitions

Infrastructure: All of the IT hardware, software, networks, data, facilities, processes and any other elements that together are required to develop, test, deliver, monitor, control or support *services*.

Service: An *infrastructure* component fulfilling a need of the *users*, such as computing, storage, networking or software systems.

Service Provider An entity responsible for the management, deployment, operation and security of a *service*.

Participant An entity providing, using, managing, operating, supporting or coordinating one or more *service(s)*.

User An individual or an organisation authorised to access and use *services*.

Community A group of *users*, organised with a common purpose, and jointly granted access to the *infrastructure*.

Sponsor An individual representing a *Community of users at PIC*. It may act as the interface between individual users and the *infrastructure*.

Management The collection of the various boards, committees, groups and individuals mandated to oversee and control the Infrastructure.

Security Contact A group or individual responsible for operational security of the Infrastructure.

In this document the key words `must', `must not', `required', `shall', `shall not', `recommended', `may', and `optional' are to be interpreted as described in RFC 2119 2.2 [R4].

Objectives

This *policy* gives authority for actions which may be carried out by designated individuals and organisations and places responsibilities on all *participants*.

Scope

This *policy* applies to all *participants*. This *policy* augments local *Service* policies by setting out additional Infrastructure specific requirements.

Additional Policy Documents

Additional policy documents required for a proper implementation of this *policy* are to be found at [R1].

Approval and Maintenance

This *policy* is approved by the *Management* and thereby endorsed and adopted by the Infrastructure as a whole. This *policy* will be maintained and revised by a body appointed by the *Management* as required and resubmitted for formal approval and adoption whenever significant changes are needed. The most recently approved version of this document is available at a location specific to the Infrastructure [R1].

ROLES AND RESPONSIBILITIES OF THE MANAGEMENT

The *Management* provides, through the adoption of this *policy* and through its representations on the various management bodies of the Infrastructure, the overall authority for the decisions and actions resulting from this *policy* including procedures for the resolution of disputes. The Management maintains the set of policies approved for use within the Infrastructure and ensures that participants are aware of their roles and responsibilities. The approved policy meets the requirement of the Sncti framework [R2] for local users from PIC.

ROLES AND RESPONSIBILITIES OF THE SECURITY CONTACT

The Security Contact coordinates the operational security capabilities of the Infrastructure, including the enabling of compliance with the Sirtfi framework [R3]. The Security Contact may, in consultation with the Management and other appropriate persons, require actions by participants as are deemed necessary to protect the Infrastructure from or contain the spread of IT security incidents. The Security Contact handles requests for exceptions to this policy as described below. The Security Contact is responsible for establishing and periodically testing a communications flow for use in security incidents.

PHYSICAL SECURITY

All the requirements for the physical security of resources are expected to be adequately covered by the Autonomous University of Barcelona (UAB) security policies and practices. This should, as a minimum, reduce the risks from intruders, fire, flood, power failure, equipment failure and environmental hazards. PIC servers are located in two technical rooms inside the UAB D Building. The main room on the ground floor has electronic access control through ID card and only PIC staff can access. The basement room is locked with a key which only PIC staff or building maintenance staff have access to.

NETWORK SECURITY

All the requirements for the networking security of resources are expected to be adequately covered by each *Service's* local security policies and practices.

To support specific *Community* workflows it may be necessary to permit inbound or outbound network traffic. It is the responsibility of the *Service* to accept or mitigate the risks associated with such traffic.

EXCEPTIONS TO COMPLIANCE

Where the processes described lead to obvious injustice and hardship due to an implementation of the process being unduly hard, a time-limited and documented exception

may be implemented after the explicit approval of Management.

Any such exception must be followed by immediate and concrete steps to address the deficiencies created within a limited time period commensurate with the discrepancy induced. The invocation of the hardship clause must not compromise the integrity or trustworthiness of the Infrastructure.

SANCTIONS

Services and *Communities* that fail to comply with this policy may lose their rights and benefits until compliance has been satisfactorily demonstrated again.

Any activities thought to be illegal may be reported to appropriate law enforcement agencies.
